ClaudeFast v4.5: Opus Optimized! ⚡

Transform Claude Code Into Your Senior Dev Team in Seconds

Build production apps 5x faster with 15 specialized AI agents, intelligent hooks, and Opus 4.5-optimized workflows. No experience required.

> "I built my entire SaaS MVP in 4 days. Alone. I couldn't have done this without ClaudeFast - it's like having a senior dev team as a solopreneur."

> - Sarah Chen, Non-Technical Founder

> "The living documentation is a game-changer. Every decision is captured automatically. I can pick up where I left off days later without missing a beat."

> - Marcus Thompson, Solo Developer

🚀 What is ClaudeFast?

ClaudeFast v4.5 is the AI coding framework optimized for Claude Opus 4.5. It orchestrates 15 specialized AI agents with two intelligent hooks that guarantee skill adherence and uninterrupted workflow.

Through context min-maxing, you get 6x more effective context before compaction. Central AI conserves context for coordination while sub-agents maximize their temporary windows.

They collaborate, hand off work seamlessly, and maintain perfect context across your entire project. The framework evolves as you work, prompting you to capture learnings into reusable skills.

Your Instant Dev Team:

- 🧠 **Master Orchestrator** - Your AI CTO planning architecture
- 🎨 **Frontend Specialist** - React/Next.js UI expert
- ⚙️ **Backend Engineer** - API and database architect
- 🗄️ **Supabase Specialist** - Real-time and auth expert
- ✅ **Quality Engineer** - Automated testing champion
- 🔒 **Security Auditor** - OWASP compliance guardian
- ⚡ **Performance Optimizer** - Speed and optimization wizard
- 🔍 **Debugger Detective** - Root cause analysis expert
- ✍️ **Content Copywriter** - Documentation and content specialist
- 🔬 **Deep Researcher** - External research and analysis expert
- 📱 **iOS Expert** - SwiftUI and native iOS development
- 🎯 **Flutter Expert** - Cross-platform mobile apps
- 🔗 **n8n Builder** - Workflow automation specialist
- 📊 **SEO Specialist** - Search optimization expert
- 📚 **Session Librarian** - Documentation organization master

---

🔥 Key Innovations: What Makes v4.5 Revolutionary

Two Foundational Hooks

v4.5 is built on two non-negotiable hooks that transform how Claude Code operates:

Skill Activation Hook

Auto-appends skill recommendations to your prompts before Claude sees them. Result: 100% skill adherence without relying on AI memory. The right context loads at the right time, every time.

Setup: Add the hook command to your `settings.json` or `settings.local.json` file (included in ClaudeFast).

Permission Hook

LLM-powered auto-approval with a 3-tier safety system. Instantly approve safe operations, block dangerous ones, analyze edge cases. Uninterrupted flow without sandbox mode or `--dangerously-skip-permissions`.

Setup: Install the npm package globally and configure your OpenRouter API key during setup.

Context Min-Maxing: 6x Before Compact

Two complementary strategies working together:

- **Central AI conserves** - Delegates micro-tasks frequently, preserving context for coordination, strategic decisions, and user communication.
- **Sub-agents maximize** - Instructed to saturate their temporary context windows (reading files, loading skills, gathering examples). Unused capacity is wasted opportunity that reduces success rates.

The result: You get 6x more effective building time before context compaction kicks in.

MCP-as-CLI Paradigm

Package MCP-like functionality as globally-installed CLI tools instead of MCP server schemas. Avoids the context overhead that happens when MCP schemas load at session start. Especially wasteful when most sessions don't need that MCP.

Self-Improvement Loop

The framework recognizes situations where:

- A workaround was needed (skill should be updated)
- A pattern emerged across 2+ sessions (new skill should be created)

Claude prompts you to capture reusable knowledge. Your framework evolves as you work.

15+ Domain Skills

Complete Skills Ecosystem:

- **session-management** - 6-phase workflow coordination
- **sub-agent-invocation** - Constitutional delegation protocol
- **git-commits** - Semantic commit conventions
- **codebase-navigation** - Project structure exploration
- **infra-ops** - VPS, SSH, Docker, Coolify, security hardening
- **payment-processing** - Stripe, Polar, Dodo integrations
- **analytics** - DataFast, Umami tracking and events
- **documentation-research** - Context7 API for live library docs

- **browser-debugging** - Chrome DevTools Protocol integration
- **frontend-design** - Distinctive, production-grade interfaces
- **seo-content-generation** - SERP analysis to publication-ready articles
- **idea-to-product** - SaaS validation, GTM strategy, co-founder creation
- **crawl-cli** - Web crawling with markdown output
- **archon** - Visual Kanban + RAG integration
- **new-skills** - Skill creation guide and templates

Living Documentation That Writes Itself

Every decision, every piece of code, every architectural choice is automatically documented in session files. Your project's knowledge grows with every session. Come back after a week, and ClaudeFast remembers everything. No context loss.

Work Like You Have a Team

```
Frontend: "I need user data from the API"
Backend: "I'll create a secure endpoint for that"
Security: "I'll review the permissions"
QA: "I'll test edge cases"
```

This happens automatically. You just describe what you want.

Smart Agent Assignment

- Building a form? Frontend Specialist handles it
- Need a database? Supabase Specialist designs it
- Something slow? Performance Optimizer fixes it
- Getting errors? Debugger Detective investigates
- Need content? Content Copywriter creates it
- Research required? Deep Researcher finds answers

You don't assign work. Claude Code knows who should handle what.

⚡ Start Building in 30 Seconds

The "Drag, Drop, Prompt" Method:

1. **Download ClaudeFast**
2. **Drop into your project** - Just extract the `.claude` folder + CLAUDE.md
3. **Open Claude Code** and start prompting:

```
"Build me a SaaS dashboard with user authentication"
```

That's it. Claude Code handles everything, powered by ClaudeFast:

- Master Orchestrator creates the plan
- Supabase Specialist sets up the database

- Backend Engineer builds secure APIs
- Frontend Specialist crafts the UI
- Security Auditor validates everything
- Quality Engineer adds tests

You get production-ready code, not demos.

🎯 Perfect For You If...

✅ You're a **non-technical founder** with a SaaS idea

✅ You're a **solo developer** wanting to work 5x faster

✅ You're **learning to code** but want to build real apps now

✅ You want **enterprise-quality code** without a team

✅ You need to **ship fast** without compromising quality

💡 Real Examples, Real Results

"Build a Customer Portal"

You type: "Create a customer portal with subscription management"

Claude Code delivers:

- Secure authentication system
- Stripe subscription integration
- Beautiful responsive UI
- Real-time updates
- Automated testing suite
- Production deployment ready

Time: 4 hours instead of 4 weeks

"The AI That Goes Beyond Your Request"

Real v4 Example: Developer requested 5 features for an MCP server rebuild.

Claude Code delivered:

- All 5 requested features ✅
- **Plus a 6th feature unprompted** ✅
- 6th feature: Intelligent combination of all 5
- Exactly what was needed but not explicitly requested

This is skills-first architecture in action. AI has the context to synthesize optimal solutions, not just follow literal instructions.

"My App Is Slow"

You type: "My app is loading slowly, fix it"

Claude Code delivers:

- Performance audit report
- Optimized database queries
- Lazy-loaded components
- Compressed assets
- CDN configuration
- 3x faster load times

Time: 1 hour instead of days of debugging

🎤 Voice-Driven Development

AI-led development benefits greatly from detailed, thoughtful prompting and therefore works very well when using a transcription tool. The current best in the market is **Aqua Voice** - they have their own Avalon model released very recently (v0.8) which is a voice-to-text model that surpasses Google and OpenAI's own models when it comes to LLM-specific prompting and developer jargon.

📢 Try Aqua Voice

Speaking your requirements naturally often produces better results than typing, as you tend to provide more context and think through problems more thoroughly when explaining them out loud.

Why Voice Works Better:

- More natural expression of complex requirements
- Developers naturally use technical jargon when speaking
- Longer, more detailed descriptions without typing fatigue
- Better articulation of edge cases and concerns
- Aqua Voice's Avalon model specifically trained on developer speech patterns

---

🚀 Choose Your Workflow: Dual Compatibility

ClaudeFast v4.5 gives you TWO complete workflow systems in one framework:

Option 1: Session Management (Pure Terminal)

- Zero external dependencies
- Jump straight into coding with a single prompt
- No Docker setup required
- Perfect for developers who live in the terminal
- **90% of users start here**

Option 2: Archon MCP (Visual Kanban + RAG)

- Beautiful visual task management interface
- RAG-powered intelligence that learns from your docs
- Project document management
- Hierarchical knowledge search

- **5-minute setup for advanced features**

The breakthrough: Same framework, different interfaces. Switch between them anytime. Progressive disclosure makes both possible without conflict.

📁 What You Get

```
your-project/
├── .claude/
│   ├── agents/        # Your 15 AI specialists
│   ├── skills/        # 15+ domain skills (infra, payments, analytics...)
│   ├── hooks/         # Skill activation + permission automation
│   └── tasks/         # Living documentation & session files
├── CLAUDE.md          # Your mission control (v4.5 optimized)
└── [your code]        # Production-ready from day one
```

Every file is purposeful. Every agent is specialized. Hooks handle orchestration. Skills load on-demand.

🎨 How It Actually Works

Without ClaudeFast:

```
You: "Build a user dashboard"
Claude: "Here's some generic React code..."
[Hours of back-and-forth, losing context, starting over]
```

With ClaudeFast v4.5 (Hooks + Skills):

```
You: "Build a user dashboard"

[Skill Activation Hook fires automatically]
→ Appends skill recommendations to your prompt
→ Claude sees: "Load session-management, sub-agent-invocation"

[Permission Hook handles approvals]
→ File reads: auto-approved
→ Code writes: auto-approved
→ Dangerous commands: blocked

Master Orchestrator: "I'll coordinate this. Breaking into tasks..."
Frontend: "I'll design the UI components"
Backend: "I'll create the data APIs"
Security: "I'll ensure proper authentication"

[4 hours later: Production-ready dashboard, zero interruptions]
```

The difference: Hooks handle orchestration. Skills load automatically. You stay in flow.

🚦 Getting Started

1. Download ClaudeFast v4.5
2. Extract `.claude` folder + `CLAUDE.md` to your project
3. Install permission hook: `npm i -g @abdo-el-mobayad/claude-code-fast-permission-hook`
4. Configure permission hook: `cf-approve install && cf-approve config` (add your OpenRouter API key)
5. Copy the skill activation hook command into your `settings.json` (included in ClaudeFast)
6. [Optional] Install Archon MCP for visual Kanban + RAG features
7. Open Claude Code and start building

🛠️ Stack & Technologies

ClaudeFast specialists are experts in modern tech:

- **Frontend**: React 19, Next.js 15, TypeScript, Tailwind CSS
- **Mobile**: SwiftUI (iOS), Flutter (cross-platform)
- **Backend**: Node.js, Server Actions, REST/GraphQL APIs
- **Database**: PostgreSQL, Supabase, Prisma
- **Testing**: Vitest, Playwright, React Testing Library
- **Automation**: n8n workflows, custom MCP servers
- **SEO**: Technical SEO, DataForSEO API integration
- **DevOps**: Vercel, Docker, GitHub Actions
- **More**: Stripe, Auth.js, WebSockets, and 50+ integrations

---

🌟 Success Stories

"From Idea to $10K MRR in 6 Weeks"

"As a non-technical founder, I thought building a SaaS would take months and $50K in developers. With ClaudeFast, I built and launched in 6 weeks. Now at $10K MRR and growing."

- Jennifer Park, Founder of TaskFlow

"Finally Built My Dream App"

"I tried learning to code for 2 years. Always got stuck. ClaudeFast let me build the app I dreamed of in my first week. It's like having patient teachers who never judge."

- David Kim, Aspiring Developer

🔮 The Future You're Choosing

Without ClaudeFast:

- **3 hrs** - Researching Claude Code best practices
- **2 hrs** - Writing custom agent prompts
- **4 hrs** - Testing different context strategies

- **6 hrs** - Building session management from scratch
- **3 hrs** - Figuring out task organization
- **2 days** - Trial & error on agent coordination
- **5 hrs** - Optimizing token usage patterns
- **8 hrs** - Creating workflow documentation
- **∞ hrs** - Wondering if your setup is optimal

Total: 29+ hours of setup before you even start building

With ClaudeFast v4.5:

- **30 sec** - Drag & drop .claude folder
- **Instant** - 15 pre-configured specialist agents
- **6x** - Context before compaction (min-maxing)
- **100%** - Skill adherence via activation hook
- **Zero** - Permission interruptions
- **15+** - Domain skills loaded on-demand
- **Evolving** - Framework improves as you work
- **Full** - InfraOps for VPS/deployment ready
- **Opus 4.5** - Optimized for latest Claude model

Total: Start building in under a minute, stay in flow forever

---

🎯 Common Questions

Q: Do I need coding experience?

A: No. Claude Code explains everything and guides you. Many successful users started with zero coding knowledge.

Q: Is this just fancy prompts?

A: No. It's 15 specialized agents built on Anthropic's Skills architecture with progressive disclosure, context isolation, constitutional delegation protocol, and intelligent task management.

Q: What can I actually build?

A: Full-stack web apps, SaaS products, marketplaces, dashboards, APIs, mobile apps (iOS/Flutter), Chrome extensions, n8n workflows, and more.

Q: How is v4.5 different from v4?

A: Key improvements:

- Two foundational hooks (skill activation + permission automation)
- Context min-maxing strategy (6x before compact)
- MCP-as-CLI paradigm (skills loaded on-demand, not at startup)
- Self-improvement loop (framework prompts you to capture learnings)
- 15+ domain skills (InfraOps, payments, analytics, browser debugging)
- Optimized for Claude Opus 4.5 (Various Claude MD and Core Skill Tweaks)

Q: What are the two hooks?

A: **Skill Activation Hook** auto-appends skill recommendations to your prompts = 100% adherence. **Permission Hook** auto-approves safe operations via LLM = uninterrupted flow without sandbox mode.

Q: Do I need the Archon integration?

A: No. Session Management workflow gives you 100% functionality. Archon adds visual task management and RAG capabilities. Nice to have, not must have.

Q: What are "Skills" exactly ?

A: Domain-specific knowledge loaded only when needed. InfraOps for VPS/deployments, payment-processing for Stripe/Polar, analytics for tracking. Loaded on-demand via the Skill Activation Hook.

🎯 Final Words

Every successful founder, developer, and maker started with a decision to try something new.

ClaudeFast v4.5 isn't just a framework. It's the first AI coding system with intelligent hooks that guarantee skill adherence and uninterrupted flow. The framework evolves as you work, capturing your learnings into reusable skills.

It's your pathway from "I wish I could build that" to "I built that better than I imagined."

Your AI dev team is waiting. Your ideas deserve to exist. Your SaaS dreams are 30 days away from becoming reality.

Ready to transform how you build?
